

MEDITECH Expanse TIP SHEET

Improved Status Board Layout for Infection Preventionists

The layout of the Patient Care Status Board has been improved to more efficiently meet the needs of Infection Preventionists by bringing visibility to meaningful data elements.

The screenshot shows a patient care status board for a patient with account flag 'P'. The interface is divided into several sections:

- Callout 1:** Points to the patient header information including Name with Account Flag, Room/Bed, Age/Sex, Reason for Visit, and various clinical alerts.
- Callout 2:** Points to the middle columns containing surveillance flags for Urine Cultures, Blood Cultures, C. Diff Order/Poa, UACs, Ports, Midlines, and Vents.
- Callout 3:** Points to the right side of the board containing indicators for UNC, Microbiology, and Neg/SP Notes.
- Callout 4:** Points to the patient's vital signs and demographics, including Hx/IDN, Height, Weight, and Temperature.
- Callout 5:** Points to the detailed clinical notes and orders, such as 'CLINIC OR PHYS OFFICE REFERRED' and various FPOC (Focal Point of Care) orders.

Image (1) demonstrates the improved view of the Patient Care Status Board for Infection Preventionists.

The middle columns (2) in the main region house Surveillance Flags for the following Surveillance Profiles that are within the Infection Prevention Watchlist:

- Urine Culture pending
- Positive Urine Cultures
- Urinary Catheter
- Blood Culture pending
- Positive Blood Cultures
- MDRO This Visit
- C. diff order pending on positive screening
- C. diff Risk – positive screening in FPOC
- Isolation Patients
- Central Line
- UACs
- Ports
- Midlines
- Vents

Columns (3) on the right contain Indicators that also serve as “launch points” into specified areas of the chart.

- **UNC** – this indicates that there are Uncollected Specimens on the patient. When selected, this Indicator will launch into the Orders screen for the

1 Name with Account Flag

Admit Status	Admit Date	Special Inf			CX/PRCC/Dialysis	Vent		
Admit Status	Admit Date	Discharge						

6 Patient Care Status Board

Account Number	14289	Reason For Visit	Urine Cv	Blood Cv	C. Diff Order/Pre	UACs	Microbiology	Msg/IP Notes
Admit Status	Admit Date	Responsible Provider	Urine Cv +	Blood Cv +	C. Diff Risk	Alerts		
Admit Status	Admit Date	Attending Provider	Urinary Cath	MDRO This Visit	Isolation Status	MedWn		
Admit Status	Admit Date	Special Inf			CX/PRCC/Dialysis	Vent		
Admit Status	Admit Date	Discharge						

uncollected orders to be viewed.

- **Microbiology** – this indicates that there are Microbiology labs ordered/pending/resulted. When selected, this Indicator will launch the user into the Microbiology sub-tab of the Diagnostics tab.
- **Nsg/IP Notes** – this indicates that there are Nursing, Infection Prevention, or other Allied Health notes on the patient. When selected, this will launch the user into the Nursing/Allied Health tab of the Chart.

Special Indicators (4) now display as bold text.

The Detail region (5) of the Patient Care Status Board has also been redesigned.

Any applicable “Clinical Alerts” will display in the Clinical Alerts row of the second column (6). Currently, the two that may display are:

- TPN Orders
- Duplicate account – Do not use

As documented by nursing, the most recent documented Isolation status and Precautions will display in the first column (1).

All of column two (2) will display responses to the First Point of Contact screening.

- Pt/representative able to complete infection screening
- Pt/close contact traveled outside U.S. in last 3 weeks
- Countries traveled
- Countries traveled comment
- Have you ever had TB or a positive TB skin test
- Recent close contact w/person w/flu-like illness, COVID, or TB
- Fever greater than 100.4 F or 38.0 C
- Cough not related to allergy or COPD
- Persistent cough greater than 3 weeks

ORDER DETAIL

The last administration of mupirocin (Bactroban) will also be displayed (1). Selecting (1) will open a popup (2) that allows the user to launch into the MAR (3) to view full administration history.

As documented by nursing, the most recent documented CHG bath and Perineal care given will also appear on the Detail region (4).

Microbiology results may also be viewed from the Detail region (1).

When (1) selected, a pop up will appear (2) that provides further information on resulted Microbiology labs, as well as Orders Without Results and their status (4).

The laboratory report may also be viewed by selecting (3).
